Description

This document is guide how to install the mobile application on a mobile devie such a smartphone / tablet. The steps for the both operation systems (iOs / android / other) are equivalent:

1. Open the browser on the mobile device.
2. Enter the VisionR web address and login into the system.
3. Save the opened module / index site as application on your mobile device.
4. Open the app.

You can work with the system in any browser (safari, chrome, edge etc.) you have on the mobile device, as well.

App on iOS devices

Open the browser on the mobile device.
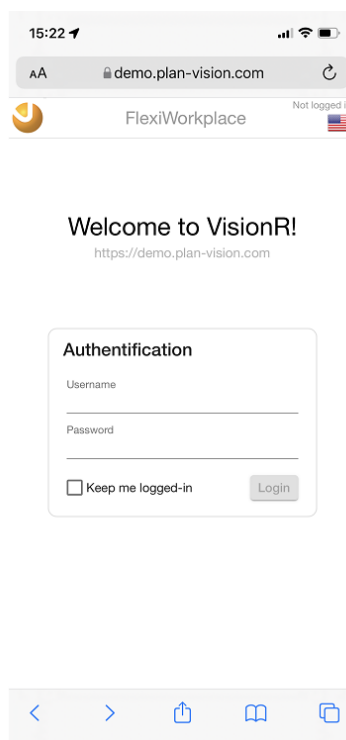

We use safari in this example.

figure 1: open the browser

Enter the VisionR web address and login into the system.

In the example is our demo server in the address bar. Type the **address of your own server**. Don't forget to login.

Save the site as application on your mobile device.

As soon the index site is loaded you can save it to your device as application or you can open a module and save this module as separate application.

On the index site are all available modules listed.

After the user is logged in, the site can be saved as application.

To do so, please click on the button in the middle:
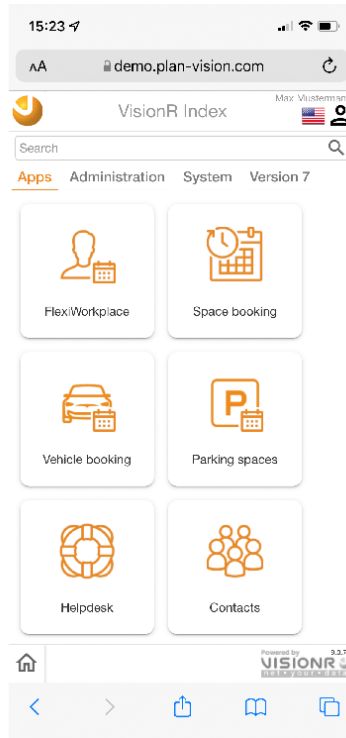

Example 1: Saving the index site as application

figure 2: Index site as app

example 2: Saving the module FlexiWorkplace as application

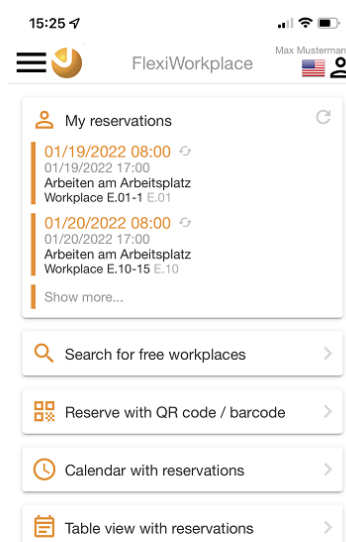

figure 3: Module FlexiWorkplace as app

Find the option „add to home screen" and click on it:

figure 4: Save the site as application to home screen

You can set your own name for the application:

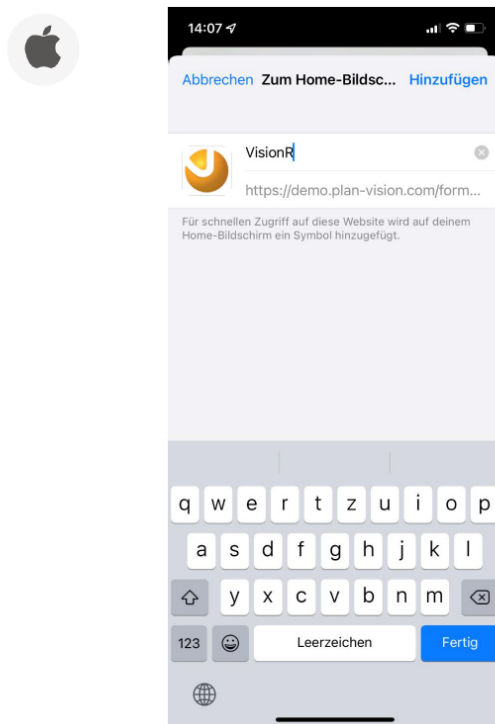

figure 5: Set a name for the app

Save the task.

Start the application

After saving the application on the mobile devce, you have to find it on your home screen.

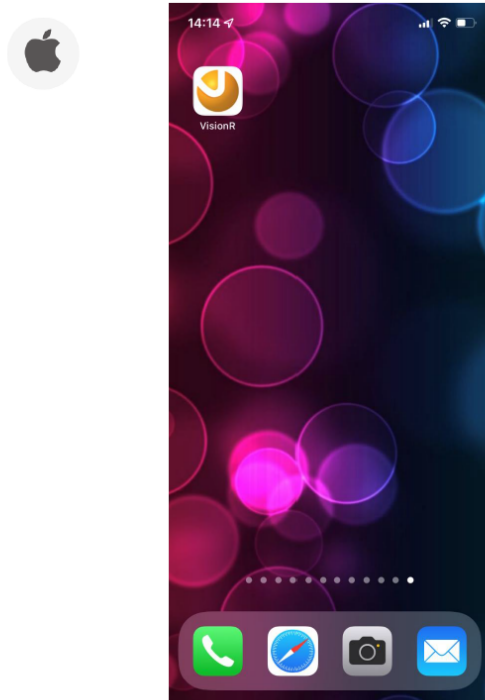

figure 6: Open the application from your home screen

Open the app and log in. The result should be like here
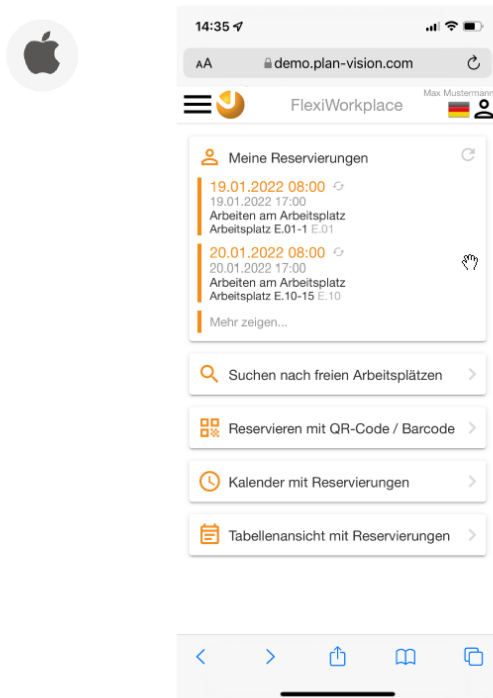

example: FlexiWorkplace application

figure 7: Overview - module FlexiWorkplace as app

App on android devices

Start the browser on your mobile device. In this example we use Google Chrome. You can use your preffered browser. Check the name of the option before saving the application.

Enter the VisionR web address and login into the system.

In the example is our demo server in the address bar. Type the **address of your own server**. Don't forget to login.

Save the site as application on your mobile device.

As soon the index site is loaded you can save it to your device as application or you can open a module and save this module as separate application.

On the index site are all available modules listed.

After the user is logged in, the site can be saved as application.

To do so, please click on the button in the middle:

figure 8: Open the browser on your mobile device

**Example 1: Saving the index site as application**

figure 9: Index site as app

As soon the index site is loaded you can add it as application on your home screen. To do so click on the three points menü as shown in the example.

*example 2: Saving the module FlexiWorkplace as application*

figure 10: Module FlexiWorkplace as app

Find the option „add to home screen" and click on it:

figure 11: Save the site as application to home screen
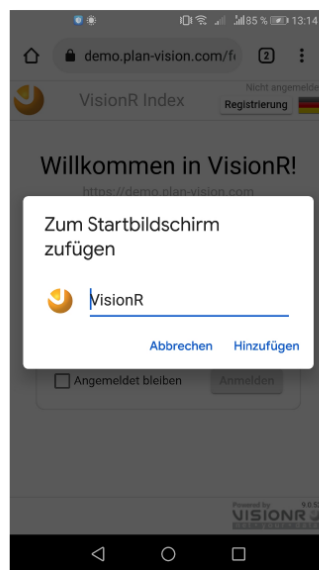

You can set your own name for the application:

figure 12: Set a name for the app

Save the task.

Start the application

After saving the application on the mobile devce, you have to find it on your home screen.

figure 13: Open the application from your home screen

Open the app and log in. The result should be like here

figure 14: Login screen

After login your screen should look like that - the index site includes all available and installed modules.
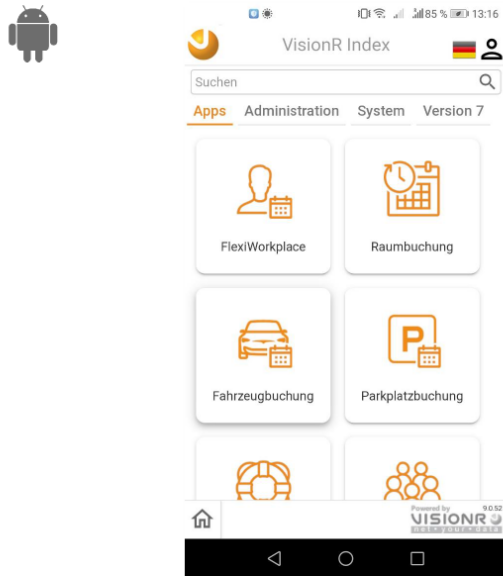

figure 15: Overview - all modules (Index site) as app

Remarks

The methods described above are for saving a single module as application and for saving the whole system as application. Also you can save any view and module as application and after your login you will see what you have saved. Every module can be saved as separate application.

Saving the index site is savin the whole system. The user will see and open every module (must be installed) where the user have the rights.
